

List of Appendixes

Number	Title
2.1	Journey report form
2.2	Filling in and handling instructions for journey reports
2.3	Commercial train types
2.4	Documents to be used during train run
3.1	Main characteristics of lines
3.2	Border crossings/stations between the Republic of Hungary and the neighbouring states
3.3	Border crossings between MÁV and GySEV
3.4	Summing up of the most important parameters of main service locations
3.5	Double track lines
3.6.1	Carriage of transport units of combined traffic
3.6.2	Line categorization on the basis of the combined traffic profile codes
3.7	ROLA
3.8	Permissible axle load for lines
3.9	Permissible running metre load for lines
3.10	Maximum permissible speed for lines
3.11	Electrified lines
3.12.1	Ground-train radio system
3.12.2	Ground-train radio
3.13.1.	Open line control and command system
3.13.2	Traffic management
3.14.1	Main characteristics of continuous data transmission and train protection
3.14.2	Lines developed for train protection
3.15	Statement on working time split from traffic control point of view
3.16	Availability of shunting
3.17	Refuelling places
3.18	Territorial location of refuelling places
3.19	Service and operational lines connecting to public network
4.1	Train path requests for passenger trains
4.2	Requests for train path and attached services for freight trains
4.2.1	Filling in instructions to Appendix 4.2
4.3	Train path request for special trains
4.4	Deadlines relating to the annual timetable
4.5	Congested sections on the European main lines
4.6	Scheduled works significantly disturbing train traffic
4.7	Availability of traffic management centres of MÁV and GySEV
4.8	Pre-constructed train paths for freight trains
6.1	Line categorisation for passenger trains
6.2	Line categorisation for freight trains
6.3	Categorisation of individual train paths
6.4	Position and categorisation of service locations
6.5	Method for charging ancillary service fees to freight trains
